SITEP™

## Multifunctional Climatic Chamber

*SITEP is a company leader in the creation of innovative technological systems for temperature, humidity and ventilation control since 1988. Based on this experience, it has prepared a climatic chamber suitable for every type of need to carry out tests on materials*

### **Recreates environments effectively**

The climatic chamber is an equipment for testing the reactions of different materials under certain environmental conditions and climatic.

The cell helps to artificially recreate the conditions needed; to analyze the product before its introduction on the market.

### **User friendly**

The practicality of the climatic chamber is guaranteed by an integrated touch screen panel that allows the automated management of temperature, humidity and the setting of customized programs.

### **Necessary for your laboratory**

The climatic chamber represents a useful equipment for the laboratory, as it can be used for different applications.

### **Suitable for all products**

The types of products to be tested are numerous, here are some of the main application sectors:

- cosmetic and pharmaceutical
- textile
- electronic components
- automotive
- building materials
- food
- military

### **Technical specification**

- PLC programmable for automatic and / or cyclic cycles
- Entirely structure in stainless steel
- Reversible doors
- Internal supports for pull-out shelves (20 pairs included)
- Adjustable feet (optional on wheels)
- External dimensions mm. 790x1000x2050h
- Internal dimensions mm. 660x860x1510h
- Voltage: 230V-1-50Hz.
- Power: 1800 W
